RECOMMENDATION STRUCTURE

Stock Recommendations

Stock ratings are based on absolute upside or downside, which we define as $(\text{target price}^* - \text{current price}) / \text{current price}$.

BUY : Expected return of 10% or more over the next 12 months.

HOLD : Expected return between -10% and 10% over the next 12 months.

REDUCE : Expected return of -10% or worse over the next 12 months.

Unless otherwise specified, these recommendations are set with a 12-month horizon. Thus, it is possible that future price volatility may cause temporary mismatch between upside/downside for a stock based on market price and the formal recommendation. * In most cases, the target price will equal the analyst's assessment of the current fair value of the stock. However, if the analyst doesn't think the market will reassess the stock over the specified time horizon due to a lack of events or catalysts, then the target price may differ from fair value. In most cases, therefore, our recommendation is an assessment of the mismatch between current market price and our assessment of current fair value.

Sector Recommendations

Overweight : The industry is expected to outperform the relevant primary market index over the next 12 months.

Neutral : The industry is expected to perform in line with the relevant primary market index over the next 12 months.

Underweight : The industry is expected to underperform the relevant primary market index over the next 12 months.

Country (Strategy) Recommendations

Overweight : Over the next 12 months, the analyst expects the market to score positively on two or more of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index Sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

Neutral : Over the next 12 months, the analyst expects the market to score positively on one of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index Sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.

Underweight : Over the next 12 months, the analyst does not expect the market to score positively on any of the criteria used to determine market recommendations: index returns relative to the regional benchmark, index Sharpe ratio relative to the regional benchmark and index returns relative to the market cost of equity.
